Sampled foot skin
Single-cell measurement
Question: intensity or prevalence?
Epidermis
Ulcer bed
Vessel
Fibroblasts
Dermis
Immune cells
Cells
RNA counts
Recovered fibroblasts / all cells
7,002-gene proportions
Frozen MLP Gaussian μ
Fibroblast gate
Mean θ / fraction θ above cut
15-topic θ = softmax(μ)
All-cell mean
Patient-unit healing contrast
Healed: 9 specimens / 7 patients
Not healed: 5 specimens / 4 patients
Non-diabetic: 11 specimens / 9 patients
Training: sampled z → softmax(z) → β decoder; Proportion cross-entropy + 0.01 Gaussian KL
Conceptual anatomy, not spatial measurements; no amputation endpoint.
